## PROFESSIONAL SUMMARY

MCA candidate targeting a Software Dev Engineer I role, with a strong foundation in data structures, algorithms, and software development across Python, Java, SQL, and REST API stacks. Completed 3 full-cycle software engineering projects spanning AI-enabled fintech, enterprise resource management, and social-impact platforms, each going from schema design to integration testing and deployment. Strong problem solving instincts, comfortable managing ambiguity, and focused on building things that have a direct impact on users.

## EDUCATION

|                                                                                                                  |                     |
|------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>G H Raisoni International Skill Tech University, Pune</b><br><i>Master of Computer Applications (MCA)</i>     | Sep 2024 – May 2026 |
| <b>GH Raisoni College of Engineering and Technology, Nagpur</b><br><i>Bachelor of Computer Application (BCA)</i> | Jun 2021 – Apr 2024 |

## TECHNICAL SKILLS

**Core CS:** Data Structures, Algorithms, Object-Oriented Programming, System Design, CS fundamentals  
**Languages:** Python, Java, C, C++, SQL  
**Databases:** MySQL, MongoDB; SQL including JOINS, aggregations, indexing, query optimization, normalized schema design  
**Frameworks:** Django, React.js, Bootstrap, REST APIs, HTML, CSS, JavaScript  
**Machine Learning & AI:** scikit-learn, ML-driven classification, OCR (receipt parsing), Computer Vision fundamentals  
**Practices & Tools:** Agile, Unit Testing, Integration Testing, Code Reviews, Git version control, Maven, VS Code, IntelliJ, PyCharm  
**Soft Skills:** Problem Solving, Analytical Thinking, Managing Ambiguity, Attention to Detail, Team Collaboration

## PROJECTS

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |                     |
|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------|
| <b>Smart Budget Planner and Expense Tracker</b><br><i>Python, Streamlit, MongoDB, scikit-learn, OCR, REST APIs</i> <ul style="list-style-type: none"><li>Built a 3-stage data pipeline (OCR receipt ingestion, scikit-learn classification, MongoDB storage) that turns receipt images into structured financial records with zero manual input, cutting core friction in personal budget tracking.</li><li>Designed and implemented REST API endpoints with session-based authentication for income/expense CRUD operations, then ran integration tests across the Streamlit frontend and MongoDB backend to catch consistency bugs.</li><li>Applied array-based aggregation and time-series grouping on stored transaction data to power real-time budget alert triggers and interactive spending trend dashboards, giving users immediate financial visibility.</li></ul> | Jan 2025 – May 2025 |
| <b>Food Waste Management System</b><br><i>Java, JSP, Servlets, JDBC, MySQL, HTML, CSS, Bootstrap, JavaScript, Maven, Chart.js</i> <ul style="list-style-type: none"><li>Owned end-to-end development of a Java EE web platform matching food donors to beneficiaries across donation listing, request, and live-tracking workflows, using location-aware matching to reduce coordination time.</li><li>Designed a normalized five-table MySQL schema with foreign key constraints and B-tree indexed columns on high-frequency query fields, cutting dashboard query latency and keeping lifecycle records consistent.</li><li>Wrote Maven-managed unit tests for the JDBC data-access layer covering all donation-matching and state-transition paths, and delivered a Chart.js admin dashboard to monitor activity and act on data directly.</li></ul>                     | Jun 2024 – Nov 2024 |
| <b>Student Management System</b><br><i>React.js, Django, Node.js, REST APIs, SQL, HTML, CSS, JavaScript, Git</i> <ul style="list-style-type: none"><li>Owned full delivery of a student records system for three user roles (Admin, Faculty, Student), building role-based authentication and access control across React.js frontend, Django REST API, and SQL backend.</li><li>Designed 15+ REST API endpoints across four resource types, validated every endpoint with integration tests before frontend wiring, catching three logic bugs before they shipped.</li><li>Found and fixed slow queries by applying multi-table JOIN optimization and column-level indexing across normalized tables, improving retrieval speed across all role views, and managed the full release cycle in Git.</li></ul>                                                                 | Jan 2024 – May 2024 |
